Just-Light UV Packer

The Just-Light UV Packer is the latest innovation in patch repair. Thanks to the integrated UV lighting, the Just-Light Packer can shorten the curing time to just 10 minutes, without affecting the preparation time. On the contrary, it gives you all the time you need for installation and precision.

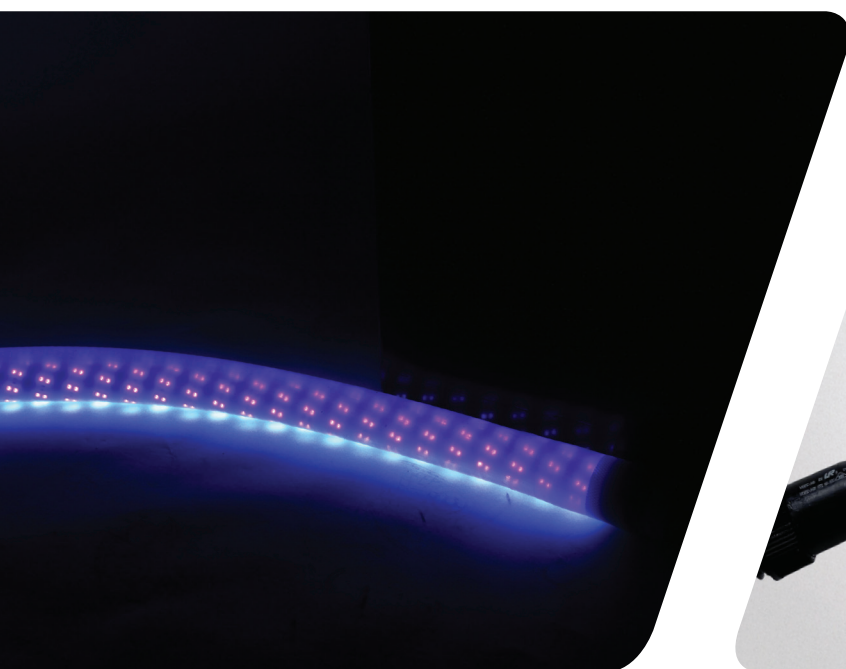

Just-Light UV Packer is designed for use in pipe sizes DN100, DN150, and DN200mm and is a groundbreaking solution in patch repair. The UV Packer is highly flexible and can navigate through soft 90° bends and repair pipe sections with up to 45° bends. It can perform a repair length of up to 285 cm.

Just-Light comes standard for DN100mm pipes but can be upgraded to DN150 and DN200mm for a modest additional fee. It must be prepared by impregnating the fibre mat or liner with UV resin in an area protected from UV and sunlight.

Controlunit for Just-Light UV Packer

The control box is necessary to have full control of the packer - it manages the curing time and controls the voltage to the UV lights. It has two displays, one of which shows the stability of the voltage to the UV lights, and the other shows the curing time. After curing, the lights automatically turn off, signaling the end of the repair.

After the repair, it is important to verify that everything was completed correctly. This can be confirmed with a TV inspection, which serves as documentation of a well-executed repair.

Silicone bladder with reinforced ends

Advantages:

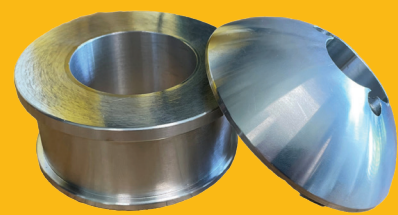

- Curing time: 10 minutes
- Available in lengths of 0.9m, 1.3m, 2.3m, and 3.1m
- Lightweight packer
- Can cure pipes from DN100-DN200mm
- Can navigate through soft 90° bends
